

TRAINING WORKSTATIONS

Routeo
A Sonepar Company

Training workstations

Rockwell Automation training workstations provide the perfect way to reinforce learning and build confidence back on site.

**Rockwell
Automation**

In today's manufacturing landscape, superior tools and technologies are essential to achieving success. Businesses that combine advanced solutions with strategic innovation consistently lead the way. But even the most sophisticated automation tools are only as powerful as the people who use them.

That's why Routeco, in partnership with Rockwell Automation, provides industry-leading training workstations designed to enhance the skills, knowledge, and productivity of your workforce. Together, we help you optimise both your manufacturing operations and your most valuable asset - your people.

These workstations empower teams to practice infrequent but critical tasks, troubleshoot safely, and build muscle memory in a controlled setting, boosting both productivity and safety.

In today's rapidly evolving industrial landscape, where skilled talent is scarce and technology is advancing, hands-on training is no longer optional - it's essential.

Rockwell Automation's training workstations are purpose-built to close the skills gap by providing:

- Real-world simulation of plantfloor scenarios using Rockwell Automation hardware and software.
- Safe environments for testing automation changes without risking live production.
- Post-training confidence, enabling engineers and technicians to apply their knowledge immediately and effectively.

Universal across all industries

Built on the same proven Rockwell Automation technologies used in real manufacturing environments, Routeco's training workstations deliver a truly authentic learning experience. They accurately replicate your plant-floor processes, enabling operators and engineers to develop and refine skills in a safe, hands-on setting.

Whether you're teaching new capabilities, refreshing existing knowledge, or testing new processes before going live, these training systems help your teams get up to speed quickly, strengthening both technical expertise and operational confidence across your workforce.

Universal Value Across Industries

Whether you're an OEM, manufacturer, or systems integrator these workstations deliver measurable benefits. They support safer operations, faster learning, and smarter automation decisions.

Investing in your people means investing in retention. Skilled, confident employees are more engaged, more capable, and more likely to stay - reducing turnover and strengthening your business long-term.

OEMs

Boost delivery speed and quality. Train engineers to configure, test, and commission machines before deployment. Reduce errors, improve customer support, and onboard new staff faster.

End Users

Protect uptime and reduce external reliance. Train maintenance and engineering teams to diagnose faults and test changes safely. Build internal capability and support continuous improvement.

System Integrators

Deliver smarter, faster projects. Train teams on the latest platforms, simulate customer environments, and reduce commissioning time. Stay agile across industries and technologies.

**ABT-TDGRDLX1-D-CE
(GuardLogix® Safety Workstation)**

Teaches safety programming using Guardlogix®

- Simulates safety circuitry with light curtains and E-stops
- Demonstrates Ethernet/IP safety data exchange
- Allows mapping of standard to safety tags

Ideal for engineers learning to implement and validate safety systems.

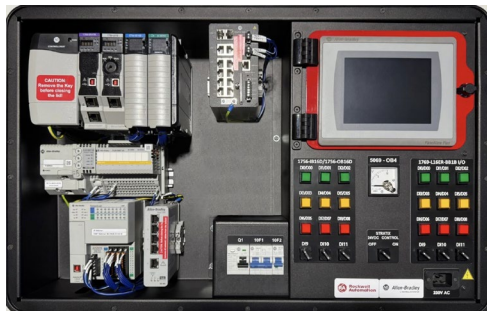

**ABT-TDCLX4-A-CE
(ControlLogix® with 5069 Compact I/O)**

Simulates plant control schemes using ControlLogix® and 5069 I/O.

- 4-slot chassis with digital and analog I/O
- EtherNet/IP networking with Stratix® switch
- Operator interface with pushbuttons, voltmeters and potentiometers

Ideal for engineers needing exposure to distributed I/O and modern control architectures.

**ABT-TDENET-B-CE
(EtherNet/IP Networking Workstation)**

Focuses on industrial networking fundamentals.

- Simulates network topologies and diagnostics
- Teaches IP addressing, subnetting and switch configuration

Ideal for technicians and engineers responsible for network setup and troubleshooting.

**ABT-TDCLX3-D-CE
(ControlLogix® - No motion)**

General-purpose ControlLogix® training without motion control.

- 10-slot chassis for flexibility
- Includes analog/digital I/O and ControlNet/EtherNet/IP modules
- Operator interface for hands-on interaction

Ideal for maintenance teams and programmers focusing on logic and I/O.

ABT-TDK5700-A-CE (Kinetix® 5700 Servo Drive Workstation)

Teaches configuration and commissioning of Kinetix® 5700 drives.

- EtherNet/IP motion control
- Integration with Studio 5000® for axis configuration

Ideal for motion control engineers and system integrators.

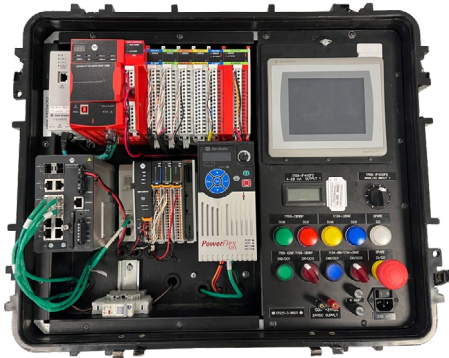

ABT-TDENET-B-CE (EtherNet/IP Networking Workstation)

Focuses on industrial networking fundamentals.

- Simulates network topologies and diagnostics
- Teaches IP addressing, subnetting and switch configuration

Ideal for technicians and engineers responsible for network setup and troubleshooting.

IA Lite workstation

Introduces engineers to the basics of Rockwell Automation's Integrated Architecture®.

- Provides hands-on experience with Logix controllers, PointMax™ I/O, and Stratix® 5200 switches
- Shows how Integrated Architecture® components connect and operate together

Ideal for engineers new to automation, OEMs, end users and system integrators building skills and training on Rockwell Automation platforms.

Purchase Outright

Owning a workstation gives long-term value for businesses running regular training, onboarding, or upskilling programmes. With your own unit, resources are always available, removing scheduling barriers and supporting a consistent “learn anytime” approach. It also allows you to tailor training content to your team’s needs while delivering ongoing cost efficiencies.

To explore whether owning a workstation is the right step, speak with your Routeco account manager or contact our Services team. We’re here to help you build the right solution for your training strategy.
